

Readiness-Based Sparing determines the inventory requirements for achievement of readiness goals

- What to stock: parts, components, sub-systems (*multi-indenture*)

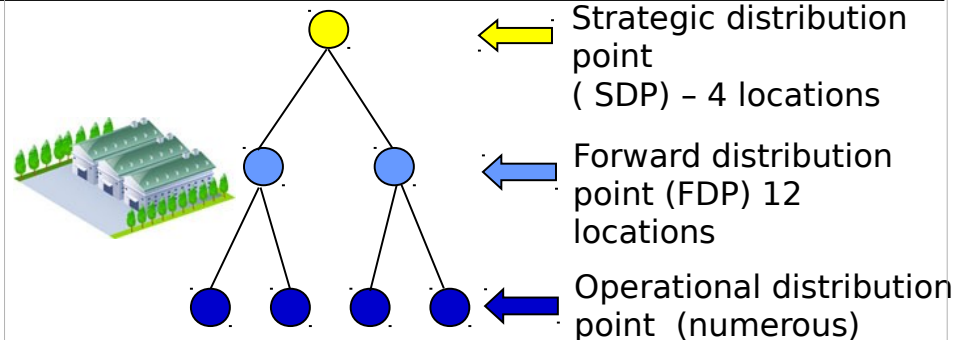

- Where to stock: at strategic distribution points (SDPs), forward distribution points

(FDPs), and/or at squadron-level or operational distribution points, (*multi-echelon*)

- Together make up two-dimensional Multi-indenture, Multi-echelon (MIME) RBS

Multi-indenture: RBS assesses trade-offs within various parts, components, and sub-systems

Multi-echelon: RBS assesses trade-offs of stocking levels for individual and/or multiple distribution points
